Downstream Notification Report NPDES Permit No: MA0100633

Date of Event: Fri, Nov 16, 2018

Dear Environmental Professionals and Interested Parties:

This report describes high-flow treatment performed at Lowell's Duck Island Clean Water Facility, as well as discharges of untreated Combined Sewer Overflows (CSOs) at the Utility's diversion structures. High-flow treatment refers to combined stormwater and sewage that receives screening and clarification before being mixed with water receiving biological treatment. This mixture is then disinfected and discharged into the Merrimack River in full compliance with permit requirements. CSO diversions are an untreated mixture of stormwater and dilute sewage that is discharged directly into nearby receiving waters when the capacity of the treatment and transport systems are exceeded as a result of heavy rain. These diversions occur only when necessary to protect public health and safety.

Please refer to the final two pages of this report for an explanation of terms.

Wastewater Flow		
to Duck Island		
Daily	Peak Hourly	Instantaneous
Flow Rate	Flow Rate	Peak Flow Rate
(MGD)	(MGD)	(MGD)
56.54	87.38	88.93

	Rainfall

Downstream Notification Report NPDES Permit No: MA0100633

Date of Event: Fri, Nov 16, 2018

Definitions and Abbreviations:

Flow Reporting Terms:

Weather Reporting Terms:

MG:

Volume in million gallons, (e.g. 2 MG = 2 million gallons) Rainfall Measurement:

Rainfall is measured by Lowell's network of rain gauges

MGD:

Flow rate in million gallons per day (e.g. a rate of 1 MGD sustained for 1 day would result in a volume of 1 MG)

Daily Rainfall, inches (in):

The total depth of rainfall measured by each rain gauge over the course of the day

Daily Flow Rate, million gallons per day (MGD):

Million gallons of flow treated at Duck Island

Maximum Hourly Rainfall (in/hr):

The greatest total depth of rainfall measured by a rain gauge in one hour

Peak Hourly Flow Rate (MGD):

The highest flow rate treated at Duck Island over a rolling one-hour period

Peak Intensity, inches per 15 minutes (in/15-min):

The greatest total depth of rainfall received in any 15-minute period.

Instantaneous Peak Flow Rate (MGD):

The highest flow rate treated at Duck Island at any moment of the day

Duration (Hour):

The number of hours in the day during which it rained.

Duration (Minutes):

Number of minutes in a given hour or over the course of the day a flow was measured
